

**The FAO comparative advantage feature is based on a calculation (as detailed below) which uses data as it is reported by resource partners to the OECD-DAC. This is a calculated and objective output based on this information. More information available at country-level may provide a different output.**

The Revealed FAO Comparative Advantage table displays five indicators for each year, country and DAC sub sector.

**Conventions used in the indicator formulas below:**

- "a" = sub-sector according to OECD-DAC nomenclature
- "z" = country
- **FAO\_az** = FAO delivery in sub-sector "a" and country "z"
- **FAO\_totz** = Total FAO delivery in country "z"
- **TOT\_az** = Total delivery in sub-sector "a" and country "z" by all ODA implementing agencies
- **TOT\_agric\_z** = Total delivery in agricultural related sectors by all ODA implementing agencies in country "z"

**Indicator Definitions:**

**(1) % Delivery over Total FAO Delivery**

Percentage of FAO delivery in sub-sector "a" and country "z" over total FAO delivery in country "z"  
= **FAO\_az / FAO\_totz**

**(2) % FAO Delivery over Total Delivery**

Percentage of FAO delivery in sub-sector "a" and country "z" over total delivery by all ODA implementing agencies in sub-sector "a" and country "z"  
= **FAO\_az / TOT\_az**

**(3) % Total FAO Delivery over Total Agriculture**

Percentage of total FAO delivery in country "z" over total agricultural delivery by all ODA implementing agencies in country "z"  
= **FAO\_totz / TOT\_agric\_z**

**(4) Comparative advantage ratio = (FAO\_az / TOT\_az) / (FAO\_totz / TOT\_agric\_z)**

- (5) Does FAO have a Comparative Advantage?** If (4) > 1 = **Yes**  
If (4) < 1 = **No**
